About Our Co-Op Program

Nasdaq's Verafin's co-op program is designed to give students real exposure to how global markets and technology come together. You'll work on meaningful projects alongside experienced teams, building hands-on skills that make an impact on the business.

We believe the best way to learn is by doing – that's why you'll be paired with a mentor, connected with senior leaders, and included in professional development sessions. You'll also join a diverse global student community, sharing experiences and building networks that last beyond the program.

Our goal is to provide a supportive, engaging, and fun environment where your work feels valued, and your growth comes first.

Verafin – Software Development Student (January 2027)

At Nasdaq Verafin, you'll have the chance to start your career in an environment where learning, teamwork, and innovation come first. In this role, you'll gain hands-on experience collaborating with software developers, solving challenging programs, and writing code that has a real impact.

You don't need to know everything on day one – we'll help you build the skills, confidence, and network to grow your career.

PLEASE NOTE:

Applicants MUST include a copy of their most recent transcript (unofficial is fine) when uploading a resume, or you may be excluded from consideration.

What You'll Do

- Collaborate with your team to deliver project requirements and contribute to ongoing initiatives.
- Bring your ideas and curiosity to problem-solving and designing solutions for technical problems.
- Participate in code reviews to ensure quality and learn best practices.
- Develop your technical and professional skills through training and mentorship.
- Gain exposure to real-world software development in a fast-paced, innovative environment.

What We're Looking For

- University students ***currently and continuing*** a degree in Computer Engineering, Software Engineering, or Computer Science, with availability for a registered January 2027 co-op.
- Eagerness to learn, ask questions, and take on new challenges.
- Strong analytical skills and a passion for creative problem-solving.
- Experience with object-oriented software development.
- Ability to work well with others and contribute to a team environment.

Nice-to-Have

- Exposure to Amazon Web Services (AWS) or cloud technologies.
- Experience with distributed computing or database technologies (i.e. PostgreSQL).
- Familiarity with automated testing frameworks.

PLEASE NOTE:

Applicants *MUST* include a copy of their most recent transcript (unofficial is fine) when uploading a resume, or you may be excluded from consideration.

This position will be located in **St. John's, NL or Toronto, ONT**, and offers the opportunity for a hybrid work environment with at least 3 days a week in office, subject to change, providing flexibility and accessibility for qualified candidates.

Come as You Are

Nasdaq is an equal opportunity employer. We welcome applications from candidates of all backgrounds and identities.

We are committed to fostering an inclusive workplace where diverse perspectives, experiences, and identities are valued and celebrated.

We ensure that individuals with disabilities are provided with reasonable accommodation throughout the hiring process.

We Power the Markets that Power the World

At Nasdaq, we're proud to be the engine behind the world's capital markets. But we don't stop there. We build the technology that drives transparency, trust, and access—helping economies grow and people thrive. Our purpose is to advance economic progress for all. Whether you're a client, a colleague, or part of our broader community, we're here to move markets—and possibilities—forward.
